

98-232

Dear Mr. Snow:

SEP 16 1998

I understand that the ROD and Certification will be available for review. I am very interested in reading these documents, especially, the Executive Orders and the Programmatic 404(b)(1) of the Clean Water Act compliance relating to this project. (Environmental Documentation).

I would like to review the agricultural conservation plans under CVPIA (for measurement and volumetric pricing).

Explain cost-share agreements and user fees. Will these be forced on people?

What is an "Operable Old River fish barrier"? What are Fish Passage Assessments and Fish Passage and Related Screen Improvements?

If there is a reduction of water for agricultural use, will less food be grown? What will happen to farmland? Will it be used for open space or wildlife reserves? Or, more housing and shopping malls? Will farmers be forced to change farming practices in order to have more water for the bugs and weeds? Ah, yes wetlands are more important than helping farmers and feeding the human population. O brother.....

Land fallowing .. how will farmers be forced to give up land - to a limited extent -- I see..... Just how many acres of ag land will be jeopardized?

Please explain "Management Structures"? Who will be in control of these?

I am concerned about the sacrifice of farmers and farmland?
~~so the environment can be~~

Blessing -
Jeanette Crosetti
